

The IPitomy IP1500 PBX System

The IPitomy 1500 is a powerful business communications platform. It is a pure IP PBX designed to use IP networks for voice calls. Engineered to support from 10 to 150 users, the system will work with analog lines and T1 /PRI lines for traditional Public Switched Telephone Network (PSTN) connectivity. In addition to traditional telephone lines, the IPitomy 1500 can use VoIP service providers like IPitomy Exchange, replacing traditional PSTN lines with a broadband connection.

The Perfect Office Solution

IP1500 handles all of your communications requirements in the office. The IP 1500 can be configured in any way that best suits your telecommunications needs. Easy connection to VoIP over your existing data connection or the IPitomy IP1500 can be linked up to the IP400 for easy connection to PSTN lines. Also available is a on board PSTN card that can handle up to twenty-four lines. If your network requires a fast moving T1 line, we have it. Add - on T1 cards can support standard T1 technology and also PRI's. The IPitomy1500 can also support dual port T1 cards. With this state of the art system the possibilities are endless. Whatever the situation maybe with the purchase of an IPitomy IP1500 you will be covered.

home phone or cell phone. Call forwarding can be enabled or disabled or rerouted by using the touch tone keypad on any telephone including mobile phones. The IPitomy IP1500 has an integrated conference bridge. The conference bridge allows callers to call directly into a password protected conference call hosted by a system user. The conference bridge allows large conference calls with up to 16 callers at once. The callers can use IP phones, analog phones, soft phones and any mixture of IP calls and regular phone lines. In addition to the IPitomy conference bridge, IPitomy phones can create multiparty conference calls just like traditional business telephones.

Quality and Security with Every Call

At IPitomy, quality voice connections are not just an afterthought. IPitomy's high performance telephone system is capable of providing quality of service technology as well as inclusion of state of the art jitter and echo cancellation not found on more expensive systems. The result is high quality voice transmission on every call.

Vast Improvement in Performance and Efficiency

IPitomy systems are designed to support IP telephones that work on a LAN or a WAN. Employees do not have to be in the office to make and receive calls. If a key employee must stay at home due to unavoidable circumstances, they can still be productive by using a remote telephone when away from the office. Calls can be sent and received just as though they were in the office; even with the caller ID from the office! IPitomy's unique call forwarding feature allows users to forward their calls to any office phone,

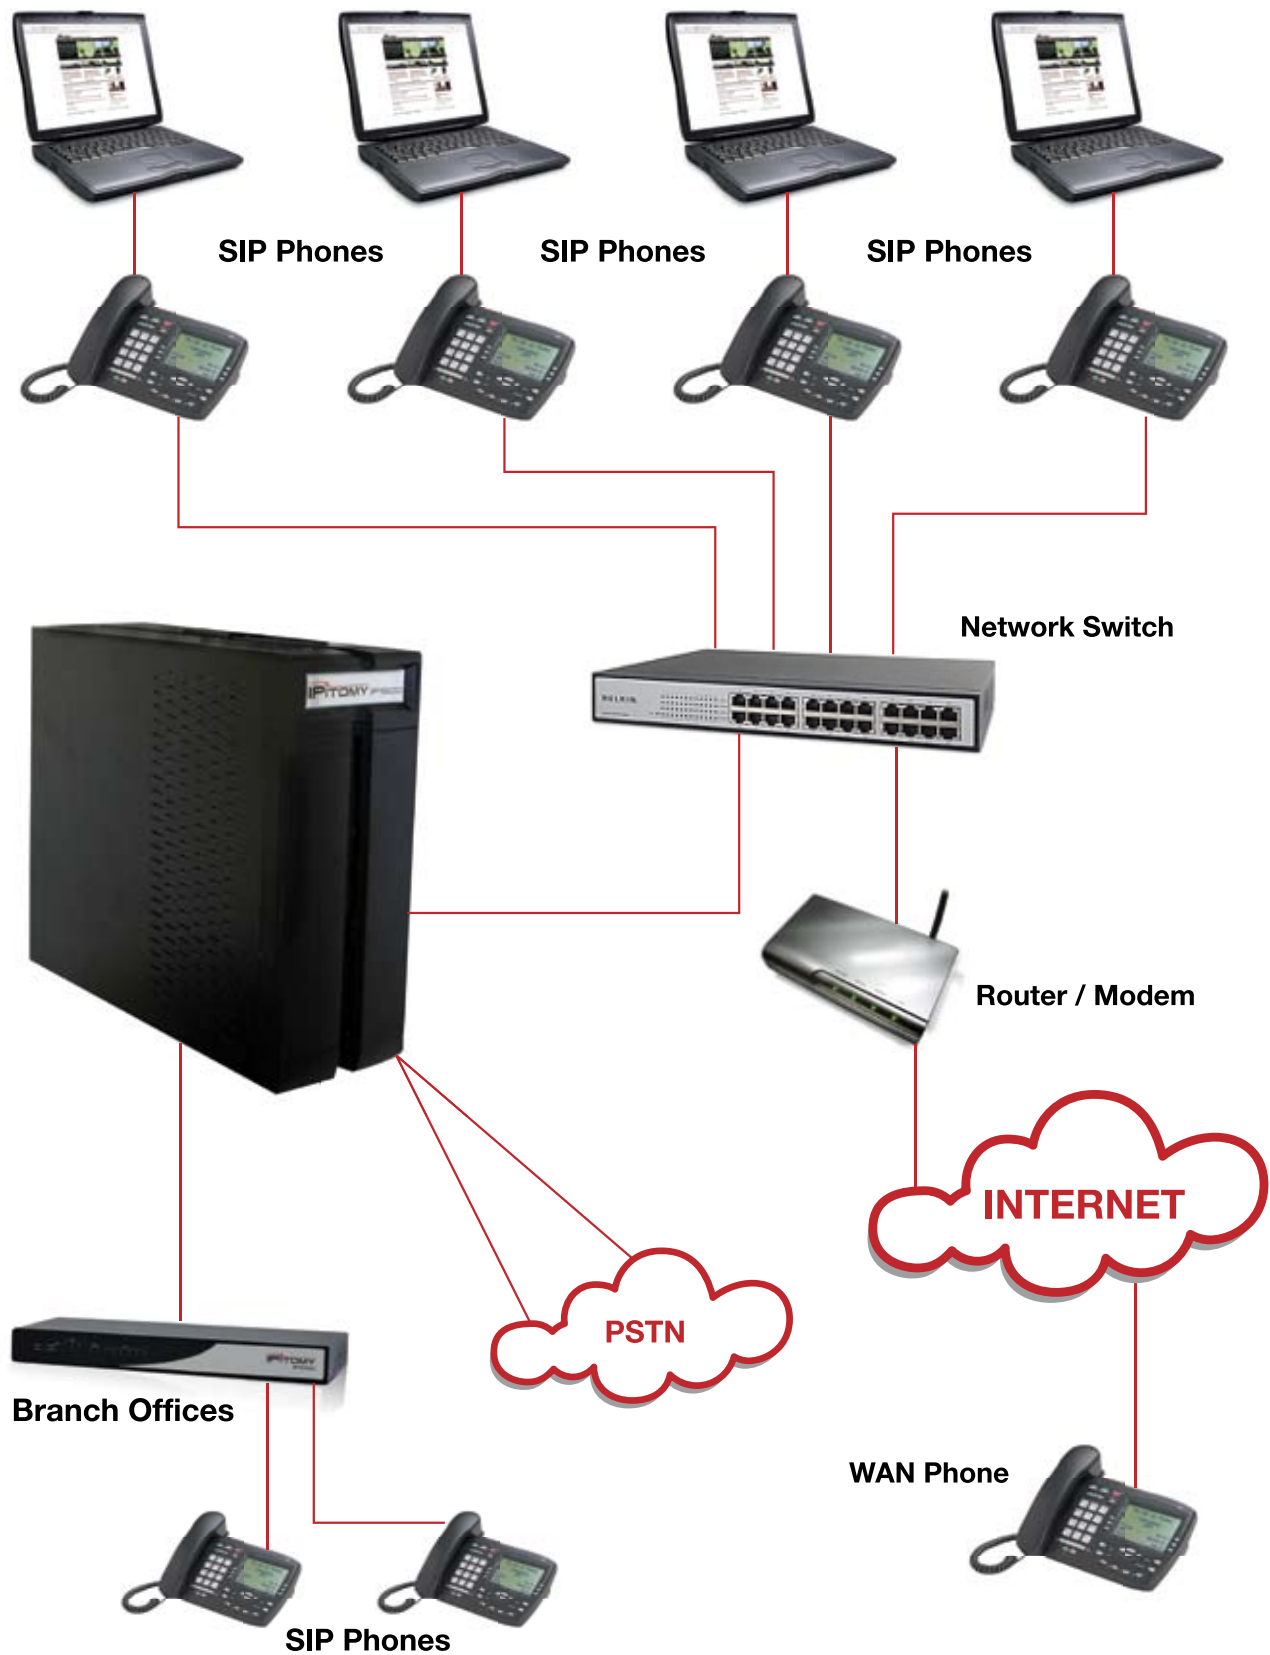

IPitomy is All Inclusive

With all of the business communications features included in IPitomy, there is never any conflict between one component and another. In the past, voice messaging systems, music on hold, call queuing, conference bridge, and automated attendants may have been separate components developed by different manufacturers. Integration of all of these devices required much time and expertise to accomplish. With IPitomy, everything is designed to work together in one comprehensive package solving the integration issues and making everything much simpler to use.

The IPitomy IP1500 has advanced messaging capabilities:

- 20 ports of simultaneous voice mail access
- 50 hours of message storage capacity
- Voice messages sent to email
- Multiple voice mail greetings
- Message folders
